FASTPEPPER SOLUTIONS Introduces FPSdirector™

Risk Management as a Service (RMaaS) solution helps businesses
manage risk while optimizing business operations.

Walnut Creek, CA, January 24, 2013– FastPepper Solutions™ announced today that it has launched FPSdirector™, a unique and holistic approach to managing business risk while optimizing business results. By applying leading business assessment methodologies in the areas of Governance, Risk, and Compliance (GRC), Information Security, Fraud Deterrence, and Information Technology, FPSdirector™ provides small and medium sized businesses (SMBs) with a complete view of business operations, identifies risks, and provides a business strategy map for business owners and executives to make optimized business decisions.

SMBs have not had to previously deal with the governance and control issues that business process virtualization and cloud computing deployments require and recent studies indicate that over 80% of SMBs do not have a formal policy dealing with information security risks.

“When you take into consideration all the other types of business risk that exist during normal operations, and the additional risk considerations that appear when outsourcing business activities and during cloud computing deployments, FPSdirector™ provides a solution to mitigate those risks.” said Wrally Dutkiewicz, Owner and Principal Consultant at FastPepper Solutions.

About FastPepper Solutions™

FastPepper Solutions provides businesses with Risk Management as a Service (RMaaS) and Technical Needs Analysis services that increase operational efficiency and mitigate risks to business information. Through its proprietary assessment tools FastPepper Solutions works with firms to strengthen internal controls and provide cost effective and competitive information management platforms including sourcing cloud solutions to meet business needs.
